

Hiber-Pro™

Maintenance made easy

Year-round protection for lift and water rides

U.S. Tsubaki, manufacturers of Union® Chain, understands the importance of proper chain maintenance—especially during the off-season. That's why we partnered with Kluber Lubrications to bring you Hiber-Pro™ lubrication to protect chain during hibernation. And it acts as a lubricant during operation, so it doesn't have to be removed when you're ready to activate the ride.

Hiber-Pro™ is a real time- and money-saver.

- Goes on easily, reducing maintenance costs.
- Resists corrosion in rain, fog, snow, and sea air, extending the life of your lift and water ride chains.
- Seals joints from water penetration.
- No floating sheen on water containment areas.
- Environmentally friendly.

Protect your chains in the off-season with environmentally friendly Hiber-Pro™ lubrication.

Method of Application: Apply with garden sprayer. Shake to mix dispersion, pour into sprayer housing, and then coat the chain.

Color: Hiber-Pro™ goes on creamy white, but becomes opaque after drying. The dispersion is nonstaining.

Container Sizes: Hiber-Pro™ is available in 4-liter (approximate coverage for 300 feet of chain) and 20-liter containers (approximate coverage for 1500 feet of chain). Approximate coverage is based on 100% total area in a 12-inch wide spray over 20 feet. Actual coverage may vary.

*Count on U.S. Tsubaki for the tools
you need to stay up and running.
